SOLID CARBIDE END MILLS

LT 4000 is the new generation of our Multi-Mat™ grade for solid carbide end mills, made with our proprietary and patented Magia Technology.

With a new and unique PVD coating material developed by Lamina, Magia Solid Carbide represents increased toughness for the most extreme applications, higher reliability in lower cutting speeds with emulsion, resulting in an extended application range that makes it easier for machinists all over the world to get the job done.

Tool life is also increased, due to reduced friction between the coating and the chips, and a harder coating composite that resists better to abrasion. We have achieved unprecedented tool life.

Proprietary and unique technology developed by Lamina Technologies in our research and development center in Switzerland.

Lamina's R&D team works ceaselessly to push the boundaries of cutting tool performance.

Lamina develops its own unique technologies and materials in order to preserve toughness and hardness with no compromises.

Magia LT 4000 is the latest, state-of-the-art PVD grade using high density plasma to create nanostructured PVD coatings with incredible properties.
